

BIKAL IMPLEMENTS UP TO DATE SELF POSITIONING CAMERAS TO PETROCHEMICAL FACILITY

Major oil refinery uses Bikal systems integration assistance to migrate to new cameras within the plant facility.

Yanbu, Saudi Arabia, 4th March 2009 Al-Kwadder Watan Group has a prominent long term Petrochemical client with over 1000 cameras per site. It is replacing cameras with up to date technology to protect the plant. The plant is on continued operation with a shut down every 6 years for maintenance.

4 self position cameras had to be supplied with NTSC and pole mounts. Securicorp Components sourced these from the USA office because the USA and Saudi Arabia share the same the viewing platform of NTSC. The cameras were a new application and with the ability to have them on poles and self positioning they were able to eliminate the use of other older cameras.

The cameras were located at the entrance and aid the visual surveillance of an exit and entrance point. This enabled manual tracking of personnel coming into and out of the plant.
